HAL is a multi-disciplinary open access archive for the deposit and dissemination of scientific research documents, whether they are published or not. The documents may come from teaching and research institutions in France or abroad, or from public or private research centers.

L’archive ouverte pluridisciplinaire HAL, est destinée au dépôt et à la diffusion de documents scientifiques de niveau recherche, publiés ou non, émanant des établissements d’enseignement et de recherche français ou étrangers, des laboratoires publics ou privés.
Cooperative Air Traffic Structuring

Multi-Agent System

- Resilient, fast and scalable method for problem solving
- Composed of agents (aircraft) cooperating to elaborate their trajectories
- Decisions taken by each aircraft, based on knowledge of its local environment

Conflict Avoidance by Speed Regulation

- Aircraft send messages containing their estimated trajectories
- Each aircraft selects optimal speed changes based on this shared knowledge
- Speeds are selected within [-6%, +3%] of its optimal speed

Macro-Structuring of Air Traffic

- The system reduces traffic complexity by structuring trajectories into flows
- The traffic complexity is monitored in real time
- The route network is dynamically adapted to fit the traffic complexity
